Stockholm, Sweden
Citizenship: USA

Researcher with expertise in large-eddy simulation (LES) and direct numerical simulation (DNS) of turbulent boundary layers, jets, and multiphase flows.

Education

- 2023 **PhD**, *Aerospace Engineering & Mechanics*, University of Minnesota
Thesis: "High-fidelity unstructured overset simulation of complex turbulent flows" [↗](#)
Adviser: Professor Krishnan Mahesh
- 2020 **MS**, *Aerospace Engineering & Mechanics*, University of Minnesota
- 2018 **BAEM**, *Aerospace Engineering & Mechanics*, University of Minnesota
Minors: Math, Astrophysics

Skills

<i>Coding</i>	Fortran, Python, Matlab, Bash, Git	<i>CFD</i>	Neko, OpenFOAM, ANSYS, Basilisk
<i>HPC</i>	MPI, Make, CMake, Hypr	<i>Meshing</i>	Pointwise, GridPro, Salome, Gmsh
<i>Visualization</i>	ParaView, Tecplot, PyVista, Blender	<i>Engineering</i>	SolidWorks, Simulink
<i>Office</i>	L ^A T _E X, Microsoft Office	<i>Manufacturing</i>	Machining, waterjet, composites

Experience

- May 2025 – Present **Postdoctoral Researcher**, *KTH Royal Institute of Technology*, Stockholm, Sweden
- Studied curvature effects on turbulent boundary layers and the von Kármán rotating disk flow.
 - Performed simulations with the open-source spectral element code *Neko* [↗](#).
- Jan – May 2025 **Group Leader: Multiscale CFD**, *Research Center Pharmaceutical Engineering*, Graz, Austria
- Aug 2023 – Jan 2025 **Senior Scientist**, *Research Center Pharmaceutical Engineering*, Graz, Austria
- Led the simulation strategy development for an EU Horizon 2020 project.
 - Coded a boundary element method from scratch to resolve sub-Kolmogorov-scale droplet breakup.
 - Discretization*: Unstructured Lagrange 6-point triangular cells, Gauss-Legendre quadrature, feature-preserving adaptive mesh refinement, curvature-adaptive Laplacian mesh smoothing.
 - Numerics*: Adaptive RK2 time stepping, matrix-free GMRES(k), fast multipole method.
 - I/O*: Binary VTK and Gmsh grid/solution files, automatic grid generation.
 - Implemented an ethanol-water mixture model in OpenFOAM to simulate impingement jet mixing.
- 2018 – 2023 **Graduate Research Assistant**, *University of Minnesota*, Minneapolis, MN, USA
Computational Fluids Lab (Professor Krishnan Mahesh)
- Performed large-scale (~10000 processor) simulations of complex turbulent flows using HPC.
 - Derived a streamline coordinate system to analyze curvature effects of an axisymmetric turbulent boundary layer.
 - Resolved experimental trip wires in LES to analyze model-scale boundary layer memory effects.
 - Identified mixing-enhancing secondary vortices from DNS and DMD of a jet in crossflow.
 - Extended an in-house unstructured finite-volume overset LES/DNS method in Fortran (MPI).
 - Implemented support for *hypr* GPU solvers with minimized LHS matrix reconstruction.
 - Added non-orthogonal Crank-Nicolson viscous flux correction and LES source terms.
 - Created grid cutting and hierarchy algorithms for overset assembly of grids for complex geometries.

- 2016–2017 **Undergraduate Research Assistant**, *University of Minnesota*, Minneapolis, MN, USA
Turbulent Shear Flow Lab (Professor Ellen Longmire)
- Designed tunable-buoyancy spheres to study particle transport in a turbulent boundary layer.
 - Characterized the particle restitution coefficient's Stokes number dependence using high speed cameras and Matlab image analysis.
 - Measured vibrations of a water tunnel traverse system to investigate PIV imaging errors.
- 2014–2019 **Chief Engineer & Aerodynamics Designer**, *University of Minnesota Formula SAE*
- Directed systems-level engineering design and led weekly meetings of a 70-member team.
 - Programmed a MATLAB graphical user interface to parameterize multi-element wing profiles.
 - Automated large-scale ANSYS CFX simulations at the Minnesota Supercomputing Institute.

Service

- 2025 Co-organizer and session chair of a workshop at the *Banff International Research Station*:
"Particulates across Scales: Mathematical Modeling, Computation, and Applications" [↗](#)
