

Nicholas Morse

Curriculum Vitae

✉ ntmorse4@gmail.com
🔗 nick-morse.github.io
📍 Stockholm, Sweden
👤 Citizenship: USA

Researcher with expertise in large-eddy simulation (LES) and direct numerical simulation (DNS) of turbulent boundary layers, jets, and multiphase flows.

Education

- 2023 **PhD**, *Aerospace Engineering & Mechanics*, University of Minnesota
Thesis: “High-fidelity unstructured overset simulation of complex turbulent flows” [🔗](#)
Adviser: Professor Krishnan Mahesh
- 2020 **MS**, *Aerospace Engineering & Mechanics*, University of Minnesota
- 2018 **BAEM**, *Aerospace Engineering & Mechanics*, University of Minnesota
Minors: Math, Astrophysics

Experience

- May 2025 – Present **Postdoctoral Researcher**, *KTH Royal Institute of Technology*, Stockholm, Sweden
FLOW (supervised by Professors Philipp Schlatter, Ramis Örlü, and Mihai Mihaescu)
- Performed 18 billion point DNS of a 3D turbulent boundary layer using 3072 GH200 superchips on Europe’s first exascale supercomputer with the GPU-accelerated spectral element solver *Neko* [🔗](#).
 - Developed a module in *Neko* for computation of scalar variance and turbulent scalar flux budgets.
 - Taught and developed exercises for a graduate-level turbulence course.
- Jan – May 2025 **Group Leader: Multiscale CFD**, *Research Center Pharmaceutical Engineering*, Graz, Austria
- 2023 – 2025 **Senior Scientist**, *Research Center Pharmaceutical Engineering*, Graz, Austria
- Led the simulation strategy development for an EU Horizon 2020 project.
 - Coded a boundary element method from the ground up to resolve sub-Kolmogorov droplet breakup.
 - Unstructured curved elements, Gauss–Legendre quadrature, adaptive mesh refinement, feature-preserving mesh smoothing, adaptive time stepping, matrix-free GMRES(k), fast multipole method.
 - Implemented an ethanol-water mixture model in OpenFOAM to simulate impingement jet mixing.
- 2018 – 2023 **Graduate Research Assistant**, *University of Minnesota*, Minneapolis, MN, USA
Computational Fluids Lab (supervised by Professor Krishnan Mahesh)
- Performed large-scale (~10000 processor) simulations of complex turbulent flows using HPC.
 - Formulated streamline coordinates to study curvature in axisymmetric turbulent boundary layers.
 - Resolved experimental trip wires in LES to analyze model-scale boundary layer memory effects.
 - Identified mixing-enhancing secondary vortices from DNS and DMD of a jet in crossflow.
 - Extended a massively-parallel in-house unstructured finite-volume overset LES/DNS code.
 - Implemented *Hypre* GPU solvers, viscous flux corrections, and overset grid cutting algorithms.
- 2016 – 2017 **Undergraduate Research Assistant**, *University of Minnesota*, Minneapolis, MN, USA
Turbulent Shear Flow Lab (supervised by Professor Ellen Longmire)
- Designed tunable-buoyancy spheres to study particle transport in a turbulent boundary layer.
 - Manufactured and set up equipment for particle image velocimetry (PIV) experiments.
 - Measured the Stokes number dependence of particle restitution coefficients using high-speed imaging.

Skills

<i>Computing</i>	Fortran, MPI, Python, Matlab, Git	<i>CFD</i>	Neko, MPCUGLES, OpenFOAM,
<i>Meshing</i>	GridPro, Pointwise, Salome, Gmsh		ANSYS, Basilisk
<i>Visualization</i>	ParaView, Tecplot, VisIt, PyVista	<i>Engineering</i>	SolidWorks, Simulink

Publications

Journal articles

Invited Talks

- 2026 *Revisiting von Kármán (1921): DNS of the rotating-disk turbulent boundary layer to $Re_\tau = 2300$* , ONERA, Toulouse, France
- 2023 *Exploring the physics of complex flows through high-fidelity unstructured overset simulations*, CSRI, Sandia National Laboratories, Albuquerque, NM, USA

Awards

- 2026 Invited Paper, Special Issue of *Flow, Turbulence and Combustion*
Best Video, Swedish E-Science Research Centre (SeRC) Annual Meeting
Erik Petersohns Memorial Foundation Grant
Semi-finalist, ERCOFTAC Milton Van Dyke Visualization Competition
- 2019 John A. & Jane Dunning Copper Fellowship for Aerospace Engineering & Mechanics
- 2018 Donald & Shirley Gorence Scholarship
- 2017 Robert H. & Marjorie F. Jewitt Fund Scholarship

Service

Co-organizer and session chair of a workshop at the *Banff International Research Station*: “Particulates across Scales: Mathematical Modeling, Computation, and Applications” [↗](#)

Reviewer for the *Journal of Fluid Mechanics*, *ASME Journal of Turbomachinery*, and *International Journal of Heat and Fluid Flow*.

Teaching & Mentorship

Developed and taught recitation exercises for a graduate-level turbulence course.

Led wind tunnel labs for laminar/turbulent boundary layer theory and self-similarity.

Mentored an undergraduate research assistant in overset DNS and simulation pre- and post-processing to simulate freely rising/falling particles in six-degree-of-freedom motion.

Interests

Mountain biking, road cycling, skiing, running, hiking, tennis, bouldering
